Use case: ban user

Main flow

1. The manager selects Ban user in the menu.
2. The system shows a list of user accounts (not currently banned).
3. The manager selects which account(s) will be banned and click next.
4. The system will ask the manager for the information regarding (each of the) the ban(s): A **type** of ban, a **start** date, **end** date, and a **comment** if necessary.
5. The manager will input the data requested in step 4.
6. The system will apply a ban for the selected user(s) and hide it from the list shown in step 2.

Alternative flows

AF to step 2

If there are no users to ban, the system will not display a list.

AF to step 3

The manager can filter the users by their **name**, **surnames**, and/or **DNI**.

AF to step 3

If no **users** are selected, the manager will be prompted to step 2.

AF to step 4

If no ban **type** is filled, or no **date** (**start** or **finish**) is provided, the system will prompt the user to the same step.

Pre-conditions

The user must be logged-in as Manager.
